SUMMARY

Final-year Software Engineering student at Yaşar University, focused on backend development with ASP.NET Core and Node.js/ NestJS. Has shipped six production applications, including a native iOS app on the App Store, and migrated a 3-million-row production database from SQL Server to PostgreSQL with zero data loss. Seeking a backend engineering internship.

EXPERIENCE

Freelance Backend & Full-Stack Developer

Dec 2025 – Present

Self-employed | İzmir, Turkey

- Migrated a ~3,000,000-row production database from Microsoft SQL Server to PostgreSQL with zero data loss, reconciling complex relational data and resolving schema and constraint mismatches between the two engines.
- Rebuilt and extended the interface of a ~30-year-old Delphi desktop application, modernizing its workflows and keeping it fully operational against the new PostgreSQL data layer.
- Delivered OptikData, a production B2B CRM for optical retailers covering prescriptions, payments, and order pipelines, using NestJS, React (Vite), and PostgreSQL with automated CI/CD and zero-downtime deploys.

PROJECTS

EdLib — Cross-Platform Education Platform

Live on iOS & Android

Flutter · ASP.NET Core 10 · EF Core · PostgreSQL · SignalR · Next.js

- Built a classroom management platform with a follow-graph-ranked teacher feed, spanning a Flutter client, an ASP.NET Core API, and a Next.js admin console.
- Implemented real-time updates over SignalR, S3-compatible media storage on Cloudflare R2, and automated image moderation via AWS Rekognition; tested with xUnit against in-memory SQLite and containerized with Docker.

Pecunie — Trading Discipline Platform

2026

.NET 10 · PostgreSQL/TimescaleDB · Redis · Hangfire · Next.js · Flutter

- Designed a pure, I/O-free domain engine that turns a written entry/stop/target plan and a risk limit into an exact position size, then monitors live market data against it.
- Achieved ~91% test coverage on the core engine using xUnit and property-based testing.
- Structured the API in vertical slices; integrated Alpaca, Finnhub, and Yahoo Finance data with Redis caching and Hangfire background jobs.

TakipNet — AI-Powered Exam Analytics App

Live on the App Store

Swift · MVVM · Firebase

- Developed a native iOS app that tracks student exam performance and identifies conceptual gaps, shipped through TestFlight and App Store Connect.

Cov0 — Football Analysis & Video Platform

In production

.NET · Go · Next.js · Redis · RabbitMQ · Cloudflare

- Built a dedicated video-processing pipeline in Go, decoupled from the .NET API via RabbitMQ, with Cloudflare R2 storage and CDN delivery.

Aptly — Multi-Tenant Scheduling SaaS

In production

NestJS · Next.js · PostgreSQL · TypeScript

- Implemented multi-tenancy and concurrency-safe booking for small businesses, deployed on Hetzner with automated CI/CD.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Dart, Swift, Go, SQL

Backend: ASP.NET Core (.NET 8/10), Entity Framework Core, NestJS, Node.js, Express.js, REST API design, SignalR, RabbitMQ, Hangfire, xUnit

Databases: PostgreSQL, Microsoft SQL Server, Redis, TimescaleDB, SQLite, database migration

Frontend & Mobile: Next.js, React, Flutter, Riverpod, native iOS (Swift, MVVM), Tailwind CSS

Infrastructure & Testing: Docker, CI/CD, Git, Linux, Cloudflare R2, Vercel, Hetzner, Firebase, property-based and integration testing

EDUCATION

Yaşar University — B.Sc. Software Engineering

Oct 2023 – Jun 2027 (expected)

İzmir, Turkey

Languages: Turkish (Native) · English (Professional working proficiency)
